Dimensions:

Construction:

metalized film electrodes,
Non-inductive, self-healing construction,
Tubular plastic case, epoxy resin sealed,
flame retardant execution, leads: dual faston`s

Applications:

DC and AC applications.

Technical data

Rated voltage U_R : Rated voltage is the max. DC or peak voltage, for which the capacitor is designed.

If the capacitor works with the DC and also super-imposed AC voltage U_{AC} , the sum of DC and the amplitude of AC must not exceed the U_R

Max permissible AC voltage: by 50Hz,

If the working frequency is higher, the permissible AC voltage must be decreased, not to exceed the max. loss power of the capacitor.

Tolerance: $\pm 5\%$, other tolerance. on request

Dissipation factor $Tg\delta$: $< 0,004$ at 100Hz and $+25^\circ\text{C}$

Insulation resistance R_{is} : $10\ 000/C$ [$M\Omega;\mu\text{F}$] at $+25^\circ\text{C}$

Operating temperature range: $-25 \div +70^\circ\text{C}$

Max permissible ambient temperature: $+70^\circ\text{C}$ on case

The highest permissible capacitor temperature at the hottest point of the case must not exceed $+85^\circ\text{C}$.

Test voltage between terminals:

1250V DC, 2sec at $+25^\circ\text{C}$

All capacitors are tested by the routine test by the producer

Protection against Over-voltages:

The capacitors are self-healing and regenerate themselves after occasional breakdowns. The capacitor remains fully functional after the breakdown.

Non Recurrent Surge Voltage: U_{PK}

If the Overvoltages exceed the permissible value above, the capacitor might have been destroyed.

Test voltage between terminals and case:

2000V, 50Hz 2sec. at $+25^\circ\text{C}$

Related standards: IEC 60384-1
